

MÉLON JOANÈS AFAGNIBO

AI & Fullstack Developer - Undergraduate AI Student at IFRI

afagnibomelonjoanes@gmail.com | <https://www.linkedin.com/in/melon-joanes-afagnibo> | <https://www.github.com/ElFuegoX>

PROFILE

AI student at IFRI with over a year of hands-on experience designing deployable AI solutions: RAG pipelines (LangChain, FAISS), LLM API integration, and machine learning. Comfortable working end-to-end on AI applications, from data pipeline to interface (Thomas, VoiceNote), backed by solid full-stack development skills (React, Next.js, Node.js, Python) that let me ship these solutions from back end to front end. Adaptable and pragmatic, I pick up new tools quickly and enjoy turning research into practical, deployable products.

PROFESSIONAL EXPERIENCE

Machine Learning Intern | NovekAI - June–July 2026

- Contributed across the full lifecycle of a machine learning pipeline for a confidential client project: data cleaning, feature engineering, data organization and storage, model training and evaluation, and design of a chatbot for internal use.

Technical Co-Director | Dimension AC - June 2025 – August 2026

- Made technical decisions and product architecture calls; designed **DM Arena**, a full-stack event platform (React, FastAPI, Supabase, deployed on Vercel).
- Designed and developed **DM Partners**, a full-stack marketplace for partner vendors (storefronts, sales tracking, admin back-office).

TECHNICAL SKILLS

- NLP, LLM & RAG:** FAISS, LangChain, TF-IDF, Hugging Face, Groq API, Llama, Chainlit, Mistral
- Machine Learning:** Scikit-learn, PyTorch, TensorFlow, NumPy, Pandas
- Full-Stack Web Development:** Flask, FastAPI, Django, React, Vite, Tailwind CSS, Supabase, Vercel, Render, Docker
- Data & Automation:** n8n, Airtable, SQL

PROJECTS

- VoiceNote:** AI-powered voice note-taking web app (PWA), live at <https://voice-note-ebon.vercel.app>
- Thomas (Bible RAG Chatbot):** Conversational RAG chatbot trained on a biblical corpus, deployed on Hugging Face Spaces (https://huggingface.co/spaces/ElFuegoX/Bible_bot)
- XoNet:** Sentiment classifier and translator for the Fon language, trained on a parallel corpus of 87,000+ sentence pairs (TF-IDF, SMOTE, Soft Voting pipeline). Ongoing project with the AIoT club at IFRI.

EDUCATION

Professional Bachelor's in Artificial Intelligence and Applications (3rd year, in progress)

IFRI, 2024 - 2027 (expected)

- Programming: Python, C, JavaScript
- AI: RAG, ML, algorithms, NLP

Baccalauréat, Series C, High Honors - 2024

CORE SKILLS

- Autonomy: managing personal projects end-to-end (100 Days of ML, Thomas)
- Strong technical rigor: documentation, code structure, project tracking
- Teamwork & capacity building: volunteer organizer of the 2026 edition of Deep Learning IndabaX Benin (participant in 2024 and 2025), coordinated workshops and peer-to-peer learning sessions for a multicultural student community
- Continuous learner: picked up new tools independently (n8n workflow automation, LangChain, FastAPI) and applied them directly to shipped projects, including AI work on the Fon language (XoNet)

LANGUAGES

French - Native • English - Working Knowledge
